

ABRAHAM DUNO

Full-Stack Multi-Platform Web, App & Game Developer

SUMMARY

I'm a multi-platform full-stack web, app and game developer with over eight years of professional experience. My expertise lies in building and integrating front and back-end projects, including AI agents, websites, apps, gamified systems, and smart contracts. I'm skilled in frameworks such as Next.js, Flask and Laravel, and I specialize in JavaScript and Typescript-based tools, including front-end libraries such as React and Vue. My experience also includes developing bots of different kinds, agents, PWAs, ECommerce platforms from scratch, mobile app design, and database design and development. I also have experience in DevOps and deployments, ranging from static to dynamic projects involving ongoing migration projects across third party platforms.

LANGUAGES

- Spanish (Native)
- English (Fluent)

KEY SKILLS

- Creating engaging and interactive websites, apps, and games
- Highly experienced in developing EVM-compatible smart contracts
- Excels at team projects and leadership
- Expert in intuitive and reactive web layout development
- Building with AI development tools and environments
- Skilled in many frameworks (Next.js, Flask, Laravel, Hardhat)
- Veteran in native JS and many of its libraries (Vue, React, ThreeJs, Express, jQuery)
- Proficient and creative in all aspects of MVC project creation, including design and development from scratch
- Experienced in building cross-platform PWAs with frameworks such as Ionic and Xamarin
- Knowledgeable in ECommerce packages like Wordpress & Prestashop
- Led mobile application offline/online database design and development
- Familiar with DevOps practices for deploying diverse static and dynamic applications, including managing continuous migration projects across multiple third-party platforms.

EDUCATION

Bachelor in Computer Science (Universidad de Oriente 2017/01 – 2019/11)

WORK EXPERIENCE

Full-Stack Web Developer

****Service Pad, LLC** (2022/10 - Present)**

- Specialized in advanced front-end development using Next.js, focusing on responsive and dynamic web interfaces that enhance user experience and optimize performance. – Engaged in innovative 3D web development, integrating interactive customizable models into web inventory applications for immersive user experiences.
- Backend development with Python and Flask, handling server-side logic, API development, and database interactions for robust full-stack solutions.

– Collaborated in cross-functional teams for the development and refinement of web applications, ensuring scalability and maintaining high standards of code quality.

Full-Stack Web Dev & Multiplatform Mobile App Developer

****Digilink C.A.**** (2018/01 - 2023/3)

- Cross-platform application development using Xamarin and SQLite with offline data synchronization
- Web apps for call-center clerk assistance using vanilla PHP and JS
- Web-Admin tools for employee scheduling, payroll reporting, and more; using Laravel, MySQL, Vue 2, and Semantic UI
- Full-Stack Dev of E-commerces, portfolios, and blogs using Wordpress and Prestashop

Multiplatform Mobile Web/App Developer

****FlexCode**** (2017/01 – 2018/04)

- Front-end development in several websites using Bootstrap, Semantic UI, and other front-end frameworks
- Full-stack development for cross-platform PWA applications using Ionic and Xamarin
- Advanced JS development for admin panel tools

TECH STACK

Languages

- Core: JavaScript (ES6+), TypeScript, Python, PHP
- Smart Contracts / Blockchain: Solidity, Rust
- Systems / Object-Oriented: C++, C#, Java
- Additional: Lua, GDScript, Pinescript

Frameworks & Libraries

- Frontend: React, Next.js, Vue.js, Bootstrap, Semantic UI, Three.js
- Backend: Node.js, Express, Flask, Laravel
- Blockchain / Web3: Hardhat, Truffle, Ethers.js, Web3.js
- Mobile / Cross-Platform: Ionic (Angular), Xamarin (.NET), React Native
- CMS & E-Commerce: WordPress, Prestashop

Databases & Cloud

- Relational: MySQL, PostgreSQL, SQLite
- Modern & Cloud-Native: Supabase, Firebase
- Experience with schema design, migrations, and offline-first synchronization

DevOps & Tools

- CI/CD & Containers: Docker, GitHub Actions
- Version Control: GitHub, GitLab, Bitbucket
- Project Management: Jira, Trello, Notion, Monday
- Deployment: Vercel, Netlify, Namecheap, DigitalOcean

AI

- Leveraging LLMs for code and docs generation, mock-up, design & documentation.

Projects

****WevPOV**** - Trading Simulator Ecosystem with 3D Gamified Modules

- Created a 3D gamified trading simulator, blending gaming and financial trading concepts.
- Focused on real-time data & simulation of market dynamics and engaging gameplay mechanics. Synced with Binance trading APIs and multi-source live market data.
- Developed a series of automated trading systems and agentic chat-bots. Involved in algorithm design, system optimization, and integration with trading platforms.

****Study Taxi**** - AI-powered course creation platform

- Built using an iterative, AI-assisted rapid-prototyping approach to develop a course creation platform that makes learning any subject engaging and accessible. Also making use of LLMs to generate personalized courses for any topic the user wants to learn.

****Geistbook**** - Agentic suite of modular bots using natural language processing to synchronize inventory data

- Building a set of LLM-powered tools for end-to-end management of administrative applications across multiple platforms and input devices.

****Arteesan**** - Open-source templates to build any kind of decentralized app idea.

- Created a dapp for a lottery that uses Chainlink's implementation of VRF for true, secure randomness.
- Built a full-stack decentralized exchange from scratch, using Smart contracts for business logic and token creation with real liquidity support using popular frontend frameworks and ABI-based communication.

****Marina Run**** - Web3 3D Game

- Developed a web3 archipelago rpg simulation game. Integrated blockchain technology for decentralized economic and social interaction within the game, along with real time chat using supabase channels and local storage synchronization.
- Used a page-based system using Nextjs routing system and CSS transitions for a multi scene game world.

****Clerks Hub (Version 3)**** - Sportsbook Administrative Platform

- Developed a comprehensive platform for clerks and administrative workers, focusing on workflow optimization and data management.

****CssCss**** - Custom CSS Framework

- Designed a styling framework to streamline web development, focusing on ease-of-use and efficiency for developers.

****jQueryTemplateView**** - Custom Frontend Framework

- Developed a lightweight jQuery-based template system to modernize legacy projects, inspired by Vue.js concepts for enhanced interactivity and performance in outdated projects.

Art Section

General Artist, Sculptor, Modeler & Animator. Texturing & Rendering.

SUMMARY

General Artist with over a decade of experience in 3D modeling & sculpting, rigging & animation for characters, real estate, motion graphics, game dev, as well as web layout design and 3D web development.

LANGUAGES

- Spanish (Native)
- English (Fluent)

KEY SKILLS

- Expert in design and creation of characters, scenes, and creatures
- Highly experienced in sculpting, modeling, and texturing for game-dev and 3D printing
- Excels at motion graphics design & production
- Skilled in many areas of architectural design and real estate rendering
- Proficient in several software like Blender, ZBrush, and After Effects
- Experienced in 3D Web Design & Development for Web Apps & Games

TECH STACK

3D Design, Sculpting & Modeling

- Blender
- ZBrush
- Sculptris
- Cinema 4D

Video & Photo Editing

- Photoshop
- GIMP
- Premier Pro
- After Effects

Animation

- Blender
- Cinema 4D
- Mixamo
